

Bu 133 Jungmeister

Our only “Short Kit” the Bu 133 comes with pneumatic wheels, laser cut parts, a full interior kit, fiberglass cowl and fiberglass fenders. With a copy of the construction article reprinted in color, this model is easy to build and a great candidate for a first scale project. Originally appearing in Model Airplane News these part sets are made specifically for builders wanting to do a “Magazine Model” If you don’t already have your plans we can help there too. We have original plan sets in 1/6, 1/4 and 1/3 scale sizes drawn specifically for the magazine. You will need to add sticks and wire, fasteners and covering to complete this kit. An Optional fittings set specific to the Bu 133 are available for different scale sizes at an additional cost.

Easy to fly and easy to transport the BU 133 even in a 1/3 scale size. Fits into most cars for the trip to the field.

Improvements to the original design make the build fast and simple. Unpublished construction photos are provided on the CD.

Designed for a Zenoah gas engine it you choose an all balsa construction the kit is ideal for electric conversion.
